# Evaluation of symmetry, power, strength, balance and recovery of the injured body part

To minimise the risk of injuries and establish the best rehabilitation treatment in the event of an injury, athletic trainers of various sports rely on our technologies and functional assessment tests. The analysis protocols included in our software allow to monitor the athlete's complete recovery and optimise the resumption of competitive sporting activity.

## Multiple factor assessment

Static and dynamic  
assessment. Load  
analysis, symmetries  
and deviation of the  
pressure centre

## Jump analysis

Analysis of force,  
speed, jump height  
and specific  
parameters

## Protocols of specific sports movements

Analysis of free  
running, treadmill  
running, bike fitting,  
total body
